

Fabric Simulator — screen designs

The full multi-tenant app, screen by screen — the consultant experience end to end, and the staff console that onboards each client. Livinit design language: periwinkle, clean, light & dark aware.

Consultant experience

Sign in → configure a piece live with the customer → render.

01 Login

The gate. Email/password plus Google & Apple (all via Supabase Auth). One login for both consultants and Livinit staff — the token decides what they see.

**Show fabrics in 3D,
live with your customer.**

Your furniture, your finishes — configured in real time.

Powered by Livinit

02 Being set up (draft gate)

If a client's tenant is still **draft**, sign-in lands here instead of the workspace — no half-built catalog is ever shown to a customer.

03 Consultant workspace — Product mode

The product. Left: this tenant's fabric library. Center: the piece with clickable parts. Right: applied material, live PBR sliders, parts list. Top: products, credit counter, Render.

Library, products and part names all come from `GET /api/catalog` — everything here is this tenant's, and only this tenant's.

04 Room mode

Stage the configured piece in a room, with the procedural curtains/blinds system. Right panel switches to room controls — curtain fabric & colour, and element toggles for walls, floor, windows.

05 Fabric Finder

Add a fabric on the fly. Upload a photo → AI reads its material properties (POST /api/find-fabric); or search PolyHaven. Preview on the model, then save to "My fabrics".

06 Render result

The Render button captures the scene and returns an AI-photoreal image (POST /api/generate). Product or Room shot. Consultant can download, share, or render again — each render draws a credit.

07 View in my room

The two-step composite. The customer uploads a photo of their actual room; the configured piece is dropped into it photorealistically (POST /api/gemini-room). The strongest close in a consultation.

Staff console

How Livinit's team onboards a client — from 2D images to a live catalog. Staff-only.

08 Clients

Every client tenant with its status and asset counts, and the entry point to onboard a new one.

Clients

12 tenants · 2 in setup

CLIENT	STATUS	PRODUCTS	FABRICS
Acme Furniture	Live	8	24
Bhavya Interiors	Draft	0	0
Cove & Co.	Live	15	41
Dune Living	Live	6	18
Elm House	Draft	3	9

Status gates access: a client can only log in once their tenant is **Live**. Draft tenants are still being built.

+ New client

09 Create client

Step 1 of onboarding: create the tenant and the first client login. Creates the tenant in **draft** and emails an invite (POST /api/admin/tenants + .../members).

The screenshot shows a web browser window with the address bar displaying `web.simulator.livinit.ai/admin/new`. The interface has a light blue sidebar on the left with the following items: a 'Simulator' header with a diamond icon, a 'Clients' section with a grid icon, an 'Onboard' button highlighted in white, and a 'Settings' section with a gear icon. The main content area is titled 'New client' and indicates 'Step 1 of 4 · account'. It contains a form with three input fields: 'Client name' with the value 'Bhavya Interiors', 'URL slug' with the value 'bhavya · web.simulator.livinit.ai', and 'Primary contact (their login)' with the value 'buyer@bhavya.com'. Below these fields is a large blue button labeled 'Create client & send invite'. At the bottom, a light blue banner contains the text: 'Creates the tenant in **draft** + a client membership. They'.

10 Onboard product & segment parts

The key workflow. Upload the finished GLB, then author the **part map** — name each mesh and mark which parts a consultant can re-fabric. This is "our team segments the sections", in the tool.

web.simulator.livinit.ai/admin/bhavya/products/new

11 Add fabric

Register a finish for the client's library: upload PBR maps (or seed from a photo), set the base colour, tune the material defaults (POST /api/admin/fabrics).

12 QA & go live

The final gate. Preview the tenant as a client, run the readiness checks, then activate — which flips the tenant to **Live** and lets the client log in (POST /api/admin/tenants/:id/activate).

Review & go live

Step 4 of 4 · Bhavya Interiors

◆ Preview as this client

Opens the workspace exactly as Bhavya's consultants will see it.

READINESS CHECKS

✓	4 products registered	4 / 4
✓	Every product has a part map	4 / 4
✓	12 fabrics with PBR maps	12
!	Thumbnails generated	3 / 4
✓	Client login invited	sent

Activation is allowed once the blockers clear. The amber item is a warning, not a blocker.

Activate — go live

Screen designs for the multi-tenant Fabric Simulator (schema simulator) — 12 screens across the consultant and staff journeys. Static hi-fi mockups (the 3D viewport is an SVG placeholder); visuals in Livinit's periwinkle design language, grounded in the codebase and API surface.
